Toronto 1, Ontario.

FILE No. B-8136

Attention: Dr. Robert Clark

Dear Sirs:

Re: Business Tax Assessment - Parking Lots.

We are the solicitors for the Toronto Parking Operators Association. This Association represents all of the major parking lot operators in Metropolitan Toronto other than the Toronto Parking Authority. Its members operate in excess of two hundred parking lots.

Your Committee's advisers have indicated that you have under consideration the amount of business tax that should be paid by the operators of parking lots throughout the Province of Ontario. In view of the fact that over eighty per cent of the parking business done in Ontario is done in Metropolitan Toronto, it can be seen that this is primarily a problem related to Metropolitan Toronto and that the experience and views of our client really represent the experience and views of the industry as a whole.

... cont'd.

It is our client's submission to your Committee that the business tax assessment for parking lots should continue to be computed at the existing percentage of ten percent of the assessed value of the land and should not be increased. Any change in the rate on the undeveloped lots will have the result of increasing the burden of taxes on realty in an area where it can least be borne.

We believe that careful examination of all the facts surrounding the operations of parking lots will substantiate that it is in the public interest for this assessment to remain at the present figure of ten percentum and any increase would have a detrimental effect on undeveloped land in Metropolitan Toronto in particular and also upon the parking industry and the general public.

The differentiation between the ten percent tax on the parking lot and the twenty-five percent charged on the parking garage was made originally by the Legislature with good cause. It is our submission that the reasons are as valid today as when the legislation was first enacted. The parking lot business as opposed to parking garages is usually conducted on very valuable properties in strategic locations that are in a transitional stage awaiting development. In many cases, they are leased by the owners to the parking operators at a rent which, due to the high value of the property, barely covers the carrying charges of the property while it awaits development. Unfortunately, even although the rents are

comparatively low having regard to the value of the property, they are high having regard to the income that can be earned on a parking lot and the margin of profit is very small. The increase of business assessment would, therefore, inevitably result in lower rents and would really be borne by the owner of the property.

This is the basic submission of this brief and to assist in substantiating it, we are attaching to this memorandum as Schedules "A", "B", "C" and "D", four statements of the largest parking operators in the Province which show the very low return that is received by those operating this business. In the event that this requires any further clarification, we would be pleased to provide the same for you.

We are also attaching to this memorandum as Schedule "E", a list of typical properties used for parking lots in Toronto where the operators do not own the lots in question showing rents received and taxes paid by the owners. You will see from these figures that the returns to the owner of the property are extremely low having regard to the market value of the property in question which is between two and a half and three times assessed value. We have added a column to this schedule in which we have shown the amount of profit or loss sustained by the operator on a particular property which has been rented. It can easily be seen that while the rent paid to the landowner does not even pay the realty taxes levied on the property, the profit of the parking operator dealing at arms' length, is meager.

From these figures, it is apparent that an increased assessment for business tax can only result in a marginal profit business becoming unprofitable or the already poor returns, if any, received by the owner of the land being further reduced or the already high price of parking to the public being increased or all three of these things in varying degrees. It is our submission that while most of the burden would fall on the landowner because his participation is usually temporary, none of the three groups should be called upon to bear this added cost.

The rates presently being charged for parking are the maximum and the public should not be called upon to pay any more for parking facilities. In fact, an increase of prices over the present prices would probably result in a decrease in gross revenues. Experience in downtown Toronto is that any increase in the existing rate generally results in a lower volume of business being done. Therefore, the probable result of an increase in business assessment would be to throw an added burden on the realty as the margin of profit is so small that over a period of two or three years, operators would negotiate less expensive leases.

An examination of Schedules "A", "B", "C" and "D" which represent companies accounting for one half of the parking business in Toronto inclusive of the parking authority, indicates that the present business tax exceeds the profits of these companies. Any increase in the tax, if it were to be absorbed by the companies,

would then put them in a loss position. It is, therefore, submitted that by any relevant tax criteria, such an increase would be improper.

It is, therefore, our respectful submission that in an industry where the public is paying the maximum price, the operator is receiving a minimum return and the owner of the realty makes at best a 2% or 3% return on the actual value of the property and, in many cases, does not cover his operating or carrying charges, any further burden would achieve no benefits and would be inequitable.

Yours very truly,

GOODMAN & GOODMAN,

Per:

Edwin Goodman
